City of Stoughton

City receives big trust fund loan

City officials decided to apply for a State Trust Fund loan because of its low interest rate of 2.75 percent over 10 years and the $202,500 was the largest of the five loans approved by the Board of Commissioners of Public Lands. The board grants low-interest loans to fund public projects, according to a news release.

In addition to improving the police department’s building, Stoughton officials plan to put some of the money toward buying three police cars and a van for the fire department.

Remodeling the public safety building will allow the police department to expand its administrative area and move its police records into a climate-controlled second floor. Planning director Rodney Schaal said city staff is working with an architect to design the improvements and that entering space on the second floor for the police department has been part of the plan since it was constructed in 1985.

“The public safety building was designed with the expansion anticipated for the police department to go on the second floor,” he said. “Over time, they’ve become very confused in where they’ve put things now and so it’s time they moved upstairs to a portion of the building.”

Police chief Greg Lack said his department has outgrown the first floor of the public safety building and there are “some serious ventilation issues in the basement.”

Officers use plenty of different chemicals when they’re analyzing evidence and processing evidence, and so we have to have a system that handles that exchange of fresh air into the building,” Lack said. “Construction is expected to begin sometime in June and be completed in August.”
